Abstracts

The anode bed is an important component of the impressed current cathodic protection system, also known as the anode grounding device. It forms a complete electrochemical protection circuit together with the protected metal structure (such as pipelines, storage tanks, etc.). The function of the anode bed is to provide a stable current output channel, so that the current can flow evenly from the anode into the soil or electrolyte, and then flow to the protected metal structure, so that the cathode is formed on the surface of the protected metal structure, inhibiting the corrosion process of the metal.

The global Anode Bed market size was estimated at USD 2520.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
