Report Overview

Antacids are the most commonly used product for treating heartburn discomfort. And because they start to work in seconds, they're also the fastest way to relieve your symptoms. Available without a prescription, antacids are available in convenient chewable tablets or as a liquid. Most are relatively inexpensive, making antacids a popular product for fast relief. Antacids are the fastest acting heartburn relief available because they start to weaken the acid in your stomach the second they reach it. The weaker the acid in your stomach, the less likely it is to give you heartburn. The longer an antacid stays in the stomach, the longer it works. And having some food in your stomach may actually prolong an antacid's effect. Most antacids contain at least one of these key ingredients: calcium carbonate, magnesium hydroxide, aluminum hydroxide and/or sodium bicarbonate.
