Report Overview

Antenatal screening refers to a series of medical tests and procedures conducted during pregnancy to assess the health of the fetus and identify potential genetic, chromosomal, or developmental abnormalities. These screenings typically include ultrasound scans, blood tests, and non-invasive prenatal testing (NIPT) to detect conditions such as Down syndrome, spina bifida, and other congenital disorders. The market for antenatal screening is driven by increasing maternal age, rising awareness of prenatal care, and advancements in diagnostic technologies. Growth is further supported by government initiatives promoting maternal and child health, as well as the expansion of private healthcare services offering specialized screening packages. However, high costs, ethical concerns, and limited accessibility in low-income regions may restrain market expansion. Key players include diagnostic laboratories, medical device manufacturers, and biotechnology firms specializing in genetic testing. The market is segmented by test type (ultrasound, biochemical, NIPT), end-user (hospitals, diagnostic centers, clinics), and geography, with North America and Europe leading due to advanced healthcare infrastructure, while Asia-Pacific shows rapid growth due to improving healthcare access and rising disposable income.

The global Antenatal Screening market size was estimated at USD 310.09 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
