Abstracts

Anterior cervical fixation is a surgical procedure that is used to treat damaged discs that compress the spinal cord or nerve root. Surgical procedures stabilize the corresponding vertebrae and the pain is decompressed by fixing the anterior fixation system with cervical fixation devices such as anterior plating, screws, and implants. Factors such as increase in the prevalence of pseudo-arthritis, rise in geriatric population, and increasing awareness about advanced treatments will drive the market growth. In addition, the growing demand for surface-modified titanium in fixation systems and rising number of skilled professionals fuel the growth of the anterior cervical fixation devices. However, high costs of anterior cervical fixation surgeries are expected to restrain the market growth.

The global Anterior Cervical Fixation Devices market size was estimated at USD 1974.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
