Abstracts

Anterior lumbar interbody fusion is a surgery to treat disc problems in the low back. Fusion locks together two or more bones to stop painful motion and correct their alignment. Through an incision in the front of the belly, the disc is removed. A bone graft is placed in the empty space to restore the height and relieve nerve pinching. During healing, the bones fuse into one solid piece. A significant driver in the Anterior Lumbar Interbody Fusion (ALIF) market is the increasing incidence of degenerative spinal conditions and the demand for effective surgical interventions to alleviate pain and improve spinal stability. ALIF procedures offer a proven approach to address lumbar spine issues, enhancing patient outcomes. However, a notable challenge in this market is the complexity of spine surgeries and the need for precision and patient-specific care. Ensuring successful ALIF surgeries and minimizing complications require specialized training and expertise, making access to skilled surgeons a challenge in some regions. Healthcare providers and manufacturers must collaborate to ensure training and expertise are widely available while promoting the advantages of ALIF procedures to meet the evolving demands of patients seeking spinal solutions.

The global Anterior Lumbar Interbody Fusion (ALIF) market size was estimated at USD 927.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
