Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Anthocyanins For Food competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Anthocyanins for Food production reached approximately 71.66 thousand tons, with an average global market price of around US\$ 24,000 per ton. The gross profit margin of major companies in the industry is between 35% ? 55%. Single-line production capacity is 6,000 ? 12,000 tons/year. Anthocyanins for Food are natural pigments extracted from berries, vegetables, and grains, widely used as colorants and antioxidant ingredients. The industrial chain includes upstream botanical raw materials, midstream extraction plants using membrane filtration and enzymatic processes, and downstream food manufacturers, beverage brands, and nutraceutical companies supported by distribution and testing services. The market for food-grade anthocyanins is expanding as consumers increasingly prefer natural colorants and functional ingredients over synthetic additives. Anthocyanins provide vivid coloration while offering antioxidant and anti-inflammatory benefits, making them popular in beverages, yogurts, gummies, and health-oriented snacks. Clean-label and plant-based trends are driving manufacturers to replace artificial dyes with fruit- and vegetable-derived pigments. Advances in extraction technology, such as membrane filtration and enzymatic processing, are improving yield and color stability. Demand is especially strong in premium beverages, fortified foods, and children's products. As regulatory support for natural ingredients increases and global wellness trends intensify, the food anthocyanin market is expected to sustain strong growth.

The global Anthocyanins For Food market size was estimated at USD 1720.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50%

during the forecast period.
