## Abstracts

An anti-adhesion flushing solution for surgery is a sterile liquid used during or after surgical procedures to prevent the formation of adhesions, which are unwanted bands of scar tissue that can form between internal organs and tissues. These solutions are typically applied directly to the surgical site to help minimize inflammation, reduce tissue friction, and create a barrier that prevents the tissues from sticking together during the healing process. The solution often contains compounds that promote tissue hydration, reduce fibrosis, and support normal healing, thereby lowering the risk of post-surgical complications like bowel obstructions or chronic pain. Anti-adhesion flushing solutions are commonly used in abdominal, pelvic, and gynecological surgeries.<sup>40</sup>
