Report Overview

Anti-adhesion gel is a medical product used to reduce the formation of scar tissue and adhesions after surgical procedures. Adhesions are fibrous bands of scar tissue that can form between organs or tissues, causing them to stick together. Anti-adhesion gels are designed to create a physical barrier between adjacent tissues, preventing them from adhering to each other during the healing process. The gel is typically applied directly to the affected area during surgery and forms a thin, transparent, biocompatible layer that acts as a lubricant and reduces friction between tissues.
