Abstracts

Short acting beta agonists (SABAs) are bronchodilators primarily used to rapidly alleviate symptoms of acute asthma attacks. This type of drug belongs to phenylethylamine derivatives in terms of chemical structure, and can produce rapid and significant bronchodilator effects by specifically stimulating respiratory smooth muscle β_2 -adrenergic receptors. According to the selectivity differences of drugs towards receptor subtypes, they can be divided into non selective β_1 - receptor agonists (such as adrenaline and isoproterenol) and selective β_2 receptor agonists (such as salbutamol and terbutaline). The former acts on β_1 and β_2 receptors and is less commonly used due to cardiac side effects such as tachycardia. The latter exhibits significantly higher selectivity towards β_2 receptors than β_1 receptors, thereby reducing adverse effects on the heart while exerting bronchodilator effects.

The global Anti-Asthma Short Acting Beta Agonists market size was estimated at USD 15000.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
