Abstracts

An anti-caking agent powder is a food-grade additive designed to prevent the formation of lumps and maintain the free-flowing properties of powdered or granulated substances by absorbing excess moisture or coating particles to reduce cohesion. These agents work through mechanisms such as moisture absorption, interference with crystal formation, or providing a physical barrier between particles, and they are commonly derived from natural sources like starches, silicates, and phosphates or synthesized compounds such as calcium stearate or silicon dioxide. Widely used across the food, pharmaceutical, chemical, and agricultural industries, anti-caking agents ensure product quality, extend shelf life, improve handling and packaging efficiency, and meet consumer expectations for consistency and usability in products ranging from table salt and spices to fertilizers and detergent powders.

The global Anti Caking Agent Powder market size was estimated at USD 540.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
