## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Anti-Caking Agents for Fertilizer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Fertilizer anti-caking agents are chemical additives specifically designed to prevent fertilizer particles from clumping during storage and transportation. It is essential to maintain the quality and efficiency of fertilizer use, especially in large-scale agricultural production. These anti-caking agents are usually composed of surfactants, inorganic salts or organic polymers. They effectively prevent the occurrence of caking by forming a protective film on the surface of fertilizer particles and reducing the adhesion between particles. The application of anti-caking agents not only improves the fluidity and handling performance of fertilizers, but also extends the shelf life of the product. In 2024, global Anti-Caking Agents for Fertilizer sales reached approximately 228 K MT, with a production capacity of 500 K MT and an average global market price of around 2,218 US\$/MT. Global Anti-Caking Agents for Fertilizer key players include ArrMaz, Clariant, Kao Corporation, Emulchem and Hubei Forbon Technology, etc. Global top five manufacturers hold a share over 55%. The largest market is Europe, has a share about 35%, followed by China and North America, with around 23% and 26% market share respectively. In terms of product, Water Soluble Anti-Caking Agent is the largest segment, with a share over 50%. And in terms of application, the largest application is Nitrate Fertilizers, has a share over 45%, followed by Biodegradable Fertilizer, etc. As global environmental awareness increases, the market is gradually turning to biodegradable and environmentally friendly anti-caking agents. These new additives not only reduce potential pollution to soil and water bodies, but also comply with increasingly stringent agricultural and environmental regulations. Technological innovation has promoted the improvement of the effectiveness of anti-caking agents.

Modern anti-caking agents can achieve better anti-caking effects at lower usage levels, thereby reducing costs and reducing chemical residues. Some new products also have multiple functions, such as moisture resistance, improved fertilizer fluidity, and enhanced storage stability, meeting the needs of different climatic conditions and fertilizer types.

The global Anti-Caking Agents for Fertilizer market size was estimated at USD 506.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
