Abstracts

Anti-caking ingredients are food additives designed to prevent the formation of lumps and maintain the free-flowing properties of powdered or granulated food products, such as table salt, spices, flour, baking powder, and instant drink mixes; these substances function by absorbing excess moisture or coating particles to reduce their ability to adhere to one another, with commonly used anti-caking agents including silicon dioxide, calcium silicate, sodium aluminosilicate, magnesium carbonate, and starch derivatives, all of which must comply with food safety regulations set by authorities like the FDA and EFSA to ensure consumer health and product quality. The market for these ingredients is driven by the growing demand for convenience foods, extended shelf life requirements, and the expansion of the processed food industry globally, with manufacturers continuously innovating to develop natural and clean-label alternatives to meet evolving consumer preferences for healthier and more transparent ingredient lists.

The global Anti Caking Ingredient market size was estimated at USD 650.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
