### **Report Overview**

Anti Cyclic Citrullinated Peptide(Anti-CCP) Antibody Assay Kit is used to detect the presence of anti-cyclic citrulline polypeptide antibodies. Rheumatoid arthritis (RA) is a common systemic autoimmune disease, and the current diagnosis mainly depends on the clinical symptoms of the disease. The commonly used clinical biological indicators are rheumatoid factors, but rheumatoid factors also exist in a high proportion in the serum of patients with other autoimmune diseases, infected patients and even healthy people. In recent years, many natural antibodies with higher specificity have been found in the sera of RA patients, among which anti-CCP antibodies have been found to be useful in the laboratory diagnosis of rheumatoid arthritis, with sensitivity and specificity of over 80% and 96%, respectively, showing certain predictive value for joint invasion and immune damage in RA patients. Anti-ccp antibody can be used for clinical detection and early diagnosis of RA, and can be regarded as a new serological index of RA, which has a wide range of clinical applications and research prospects.
