Abstracts

Since entering the technological age, all kinds of electronic products and electrical appliances around human beings will emit electromagnetic radiation. Electromagnetic radiation is listed as the fourth largest source of pollution by the World Health Organization and is an invisible 'killer' in human life. In order to prevent electromagnetic radiation from harming human health, anti-radiation materials are used. At present, the most convenient and effective way to prevent electromagnetic radiation is to use electromagnetic shielding. It is to use a metal mesh with good electrical conductivity and magnetic permeability to block the propagation of electromagnetic radiation through reflection and absorption effects. Generally speaking, the finer the metal mesh and the smaller the mesh, the better the shielding effect.

The global Anti Electromagnetic Radiation Clothing market size was estimated at USD 792.26 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.40% during the forecast period.
