## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Anti-Fog Plastic Additive competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Anti-Fog Plastic Additive production reached approximately 1670 kilotons with an average global market price of around US\$ 360 per ton, a single-line production capacity of approximately 5,000 tons/year, and a gross profit margin of approximately 15%30%. Anti-Fog Plastic Additive is a functional polymer additive designed to prevent the formation of fog specifically discrete water droplets on the surface of plastic materials by modifying surface energy and enhancing hydrophilicity. When incorporated into plastic resins such as PE, PP, PET, PVC, or applied as a surface coating, the additive enables condensed moisture to spread into a uniform transparent layer instead of forming light-scattering droplets. This maintains clarity, visibility, and optical performance under conditions involving humidity, refrigeration, or temperature fluctuations.

The global Anti-Fog Plastic Additive market size was estimated at USD 602.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
