Abstracts

Anti fogging additives are chemical compounds incorporated into materials?typically plastics, films, or coatings?to prevent the formation of condensation and fogging on surfaces by altering the surface tension of water droplets, causing them to spread into a thin, transparent film rather than forming obstructive beads or droplets that impair visibility. These additives are widely used in applications where clarity and safety are critical, such as in automotive windshields, eyewear lenses, food packaging, medical devices, and protective face shields, and they function through mechanisms like hydrophilicity or micro-roughness to ensure sustained optical performance in varying humidity and temperature conditions.

The global Anti Fogging Additives market size was estimated at USD 385.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
