Abstracts

Anti-herpesvirus agents are a class of antiviral drugs specifically designed to target and inhibit the replication of viruses within the Herpesviridae family, including herpes simplex virus (HSV-1 and HSV-2), varicella-zoster virus (VZV), cytomegalovirus (CMV), and Epstein-Barr virus (EBV). These agents, such as acyclovir, valacyclovir, famciclovir, and ganciclovir, function by interfering with viral DNA synthesis through mechanisms like competitive inhibition of viral DNA polymerase or incorporation into the DNA chain to cause premature termination. The market for anti-herpesvirus agents is driven by the high global prevalence of herpesvirus infections, which affect a significant portion of the population either as primary infections or recurrent episodes, alongside increasing immunocompromised patient populations (e.g., HIV/AIDS patients, organ transplant recipients) who are more susceptible to severe manifestations. Key growth factors include rising awareness and diagnosis rates, advancements in antiviral drug formulations improving efficacy and patient compliance, and expanding applications in prophylactic and long-term suppressive therapy. However, the market faces challenges such as the emergence of drug-resistant viral strains, side effects associated with long-term use, and pricing pressures from generic competition, especially for older drugs like acyclovir. Geographically, North America and Europe dominate due to well-established healthcare infrastructure and higher treatment adoption, while Asia-Pacific is expected to witness the fastest growth, fueled by increasing healthcare expenditure, growing patient awareness, and rising incidences of herpesvirus infections. The competitive landscape is characterized by both branded and generic manufacturers, with ongoing research focused on developing novel agents with improved safety profiles, broader spectrums of activity, and mechanisms to overcome resistance.

The global Anti Herpesvirus Agent market size was estimated at USD 1568.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25%

during the forecast period.
