## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Anti-Human Globulin Reagent competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of Anti-Human Globulin Reagent reached approximately 21 million Dose, with an average market price of about USD 18. Anti-Human Globulin Reagent is a purified immunoglobulin preparation derived from donated human plasma, primarily used in direct or indirect Coombs tests for diagnosing autoimmune hemolytic anemia, Rh compatibility testing, and preventing hemolytic disease of the newborn. Its supply chain is structured with upstream plasma collection and biopharmaceutical manufacturers (such as Grifols, CSL Behring, Kedrion) responsible for purification and quality control, while downstream hospitals, clinical laboratories, and blood banks procure the product through distributors and medical supply chains for diagnostic and therapeutic use. With reliable performance, safety, and clinical indispensability, anti-human globulin has become a fundamental product in modern hematology and immunology diagnostics.

The global Anti-Human Globulin Reagent market size was estimated at USD 378.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
