Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Anti-inflammatory and Antiasthmatic Drugs competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Anti-inflammatory and Antiasthmatic Drugs production reached approximately 2.4 billion doses, with an average global market price of around USD 1.85 per dose. Anti-inflammatory and antiasthmatic drugs can achieve the effect of long-term prevention of asthma attacks by inhibiting airway inflammatory reactions, and have become the first-line drugs among antiasthmatic drugs. Glucocorticoids are the most powerful anti-inflammatory drugs among anti-inflammatory and antiasthmatic drugs, and also have anti-allergic effects. Long-term use of glucocorticoids to treat asthma can improve patients' lung function, reduce airway hyperresponsiveness, reduce the frequency and severity of attacks, improve symptoms, and improve quality of life. In asthma, glucocorticoids can be administered in two ways: systemic administration and inhalation. Systemic administration is prone to cause more serious adverse reactions. Inhalation administration can achieve higher drug concentrations in the airways, fully exert local anti-inflammatory effects, and avoid or reduce adverse reactions of systemic drugs. Inhaled glucocorticoids are currently the most commonly used anti-inflammatory and antiasthmatic drugs.

The global Anti-inflammatory and Antiasthmatic Drugs market size was estimated at USD 4440.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
