GPS anti-jamming protects GPS receivers from interference and intentional jamming. By the time the GPS signal reaches the earth's surface is weak and is susceptible to being overcome by higher power radio frequency (RF) energy. Even a small jammer of about 10 Watts power can disrupt an unprotected C/A code receiver for about 30 kilometres (line of sight). GPS anti-jamming uses power minimization to reduce the effect of interference and jamming so that the GPS receiver can continue to operate correctly. Global core anti-jamming antenna manufacturers include Raytheon, Rockwell Collins etc. The top 1 company hold a share about 10%. Europe is the largest market, with a share about 38%, followed by North America and China with the share about 32% and 25%. In terms of product, nulling system is the largest segment, with a share about 75%. And in terms of application, the largest application is military & government, followed by commercial.

The global Anti-Jamming Antenna market size was estimated at USD 5188.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
