Abstracts

Anti Mullerian Hormone (AMH) is a glycoprotein hormone produced by granulosa cells in ovarian follicles, serving as a key biomarker in assessing ovarian reserve and reproductive potential in women, as its serum levels correlate strongly with the number of antral follicles and are thus predictive of response to ovarian stimulation in fertility treatments; it is also utilized in diagnosing conditions such as polycystic ovary syndrome (PCOS) and premature ovarian insufficiency, and increasingly in monitoring ovarian function in cancer patients undergoing gonadotoxic therapies. The market for AMH testing is primarily driven by rising infertility rates globally, advancements in assisted reproductive technologies (ART), growing awareness of fertility preservation, and the expanding applications of AMH beyond reproductive endocrinology into areas like oncology and menopause management. Key players include diagnostic companies offering automated immunoassays and ELISA kits, with regional variations in adoption influenced by healthcare infrastructure, reimbursement policies, and cultural attitudes toward fertility treatments, while emerging trends point toward point-of-care testing and integration with digital health platforms for personalized fertility insights.

The global Anti Mullerian Hormone (Amh) market size was estimated at USD 210.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
