Report Overview

Anti-radiation drugs offer protection against radiation exposure. These drugs include KI, Prussian Blue, and DTPA (Diethylenetriamine pentaacetate). Anti-radiation medicines help block the absorption and subsequent concentration of radioactive iodine in the thyroid gland. KI must be consumed before or shortly after exposure to radioactive iodine for better results. It is effective only against radioactive iodine and not against other types of radiation. Oxidation of ferrous ferrocyanide salts produces Prussian blue that is used for the treatment of thallium poisoning or radioactive cesium poisoning.
