Abstracts

Anti radiation underwear refers to specialized undergarments designed to shield the body from electromagnetic radiation (EMR) emitted by electronic devices such as smartphones, laptops, and Wi-Fi routers, typically incorporating metallic fibers like silver or copper woven into the fabric to create a Faraday cage effect that deflects or absorbs non-ionizing radiation. Marketed primarily to health-conscious consumers, pregnant women, and individuals concerned about prolonged EMR exposure, these products claim to reduce potential risks associated with electromagnetic fields (EMF), though scientific consensus on the necessity or efficacy of such protection remains debated, with regulatory bodies like the WHO emphasizing that low-level EMF exposure from everyday devices is not proven harmful. The market includes various styles, including men's and women's briefs, boxers, and maternity designs, often sold through e-commerce platforms, wellness retailers, and specialty health stores.

The global Anti Radiation Underwear market size was estimated at USD 120.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
