### Report Overview

The anti-reflux device market comprises medical products designed to prevent or manage gastroesophageal reflux disease (GERD) by reducing the backflow of stomach acid into the esophagus. These devices range from non-invasive solutions like adjustable beds and positional therapy aids to minimally invasive surgical implants, such as magnetic sphincter augmentation (LINX) systems and endoscopic fundoplication devices. The market is driven by the rising prevalence of GERD globally, increasing patient preference for non-pharmacological treatments, and advancements in minimally invasive surgical technologies. However, challenges include high costs of surgical devices, limited reimbursement policies, and competition from pharmaceutical alternatives like proton pump inhibitors (PPIs). Key players focus on innovation in material science and procedural techniques to improve efficacy and patient compliance. Geographically, North America dominates due to high healthcare spending and awareness, while Asia-Pacific shows rapid growth fueled by improving healthcare infrastructure and rising GERD cases linked to lifestyle changes. Regulatory approvals and clinical validation remain critical for market expansion.

The global Anti Reflux Device market size was estimated at USD 107.37 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
