Abstracts

Anti-seize copper grease is a specialized lubricant formulated with copper particles suspended in a grease base, designed to prevent the seizing, galling, and corrosion of metal components?particularly in high-temperature, high-pressure, or corrosive environments. It functions by creating a protective barrier that reduces friction and resists oxidation, ensuring that threaded fasteners, bolts, and other mechanical parts remain removable even after prolonged exposure to extreme conditions such as those found in automotive, marine, industrial, and aerospace applications. The copper content enhances thermal conductivity and provides added resistance to galvanic corrosion, making it suitable for use with dissimilar metals. This product is distinct from standard lubricants or anti-seize compounds with other metallic fillers (like nickel or aluminum) due to copper?s specific properties, which include excellent conductivity and compatibility with non-ferrous metals.

The global Anti Seize Copper Grease market size was estimated at USD 280.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
