Abstracts

Anti-shake technology is a technology used to reduce blur caused by camera or device shaking during image or video shooting. It uses hardware or software to adjust the camera's posture or image processing in real time to keep the picture stable. Common anti-shake technologies include optical image stabilization (OIS), electronic image stabilization (EIS) and mechanical image stabilization. Optical image stabilization compensates for shaking by moving the lens or sensor, while electronic image stabilization uses algorithmic processing to stabilize the image and improve shooting quality. It is widely used in cameras, mobile phones, drones and other devices.

The global Anti-Shake Technology market size was estimated at USD 577.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
