Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Anti-splash Liquid competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Anti-splash Fluid production reached approximately 717 million liters, with an average global market price of around US\$ 5.6 per liter. Anti-splash Liquid, also known as anti-spatter fluid, is a specialized chemical product used to prevent welding spatters from adhering to the base metal during welding. When the anti-splash fluid is sprayed on the surface of the base metal or welding torch parts, it will form a thin film. This film can isolate the high-temperature welding spatters from the surface of the base metal or welding torch parts, so that the spatters do not adhere to the surface, but fall off easily after cooling. Anti-splash liquids are widely used in various welding occasions, such as arc welding, argon arc welding, carbon dioxide gas shielded welding, etc. They are mainly used in industries such as automotive, shipbuilding, engineering machinery, pressure vessels, and containers, which can improve welding efficiency, reduce post-welding cleaning workload, and improve the quality and appearance of welded parts.

The global Anti-splash Liquid market size was estimated at USD 4015.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
