Abstracts

Anti-Static Cellulose Tape is a specialized adhesive tape made from cellulose, a biodegradable material derived from wood pulp, that is designed to prevent the buildup of static electricity. This type of tape is treated or coated with anti-static properties, making it an ideal choice for applications where static discharge could be a concern, such as in the electronics, semiconductor, and packaging industries. The anti-static feature ensures that sensitive electronic components are protected from potential damage caused by electrostatic discharge (ESD) during handling, assembly, or storage. In addition to its anti-static properties, cellulose tape is known for being environmentally friendly, offering a strong adhesive bond, and having good transparency, making it suitable for a variety of tasks that require a clear, reliable seal without compromising the safety of static-sensitive environments. Its dual functionality of providing adhesion while safeguarding against static makes anti-static cellulose tape an essential tool in maintaining the integrity and performance of electronic devices and components.

The global Anti-Static Cellulose Tape market size was estimated at USD 441.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
