## Abstracts

Anti-static foam pouches are specialized packaging solutions designed to protect sensitive electronic components and devices from electrostatic discharge (ESD) during storage, handling, and transportation. These pouches are typically constructed from static-dissipative or conductive materials, often polyethylene or polyurethane foam laminated with metalized or carbon-loaded layers, which help to shield contents by creating a Faraday cage effect that disperses electrical charges safely. They are engineered to meet industry standards such as ANSI/ESD S541 or IEC 61340-5-1, ensuring reliability in safeguarding items like integrated circuits, circuit boards, and other static-sensitive products from damage that could result from uncontrolled electrical potential differences.

The global Anti Static Foam Pouches market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
