The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Anti-static PET Film competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Anti-static PET film is a functional polymer film made by coating conductive or anti-static agents onto a polyethylene terephthalate (PET) substrate. It offers excellent mechanical strength, thermal stability, chemical resistance, and superior electrostatic discharge (ESD) performance. The primary function of this film is to prevent the buildup of static electricity in sensitive environments, making it widely used in electronic displays, semiconductor packaging, optical laminates, and precision device protection. As the global electronics manufacturing industry moves toward higher density, miniaturization, and cleaner production environments, anti-static PET film is experiencing significant growth opportunities as a critical intermediate material. According to annual reports from Toray, Mitsui Chemicals, and Wanhua Chemical, 2023 saw a notable increase in the adoption of anti-static functional films in touch panels, Mini/Micro LED modules, and TFT-LCD optical layers. Major consumer electronics brands such as Apple, Samsung, and Huawei are also driving demand for high-grade anti-static films due to their growing reliance on flexible materials and clean assembly environments.

The global Anti-static PET Film market size was estimated at USD 98.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.30% during the forecast period.
