The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Anti-Surge Thick Film Chip Resistor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Surge-resistant thick film chip resistors are made of ceramic substrates and thick film technology, and their ability to withstand large current surge pulses is enhanced through special material formulations and structural designs. They are usually composed of a metal oxide resistive film layer screen-printed on a ceramic chip, metallized terminations and epoxy packaging. They can provide stable resistance and reliable surge tolerance performance in situations with strict transient overload requirements such as power switches, motor drives, surge suppression and overvoltage protection circuits. They have the advantages of small size, low cost, high temperature resistance and vibration resistance.

The global Anti-Surge Thick Film Chip Resistor market size was estimated at USD 474.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.90% during the forecast period.
