Report Overview

An anti-sway system (AWS), also known as a stabilizer bar or anti-roll bar, is a system that helps to reduce the body roll of a vehicle when cornering. It does this by connecting the two opposite wheels on an axle with a spring-loaded bar. When the vehicle corners, the body roll causes the weight of the vehicle to shift to one side. This causes the spring-loaded bar to twist, which in turn applies an equal and opposite force to the two wheels, helping to keep the vehicle level.
