Abstracts

Anti tailgating sensors are security devices designed to detect and prevent unauthorized individuals from closely following authorized personnel through controlled access points such as doors, turnstiles, or gates, using technologies like infrared beams, 3D imaging, or LiDAR to monitor the passage of individuals and trigger alarms or access denial when a potential tailgating event?characterized by two or more people attempting to enter with a single credential or in rapid succession?is identified. These systems are widely deployed in high-security environments, including corporate offices, data centers, government facilities, and airports, where maintaining strict access control and preventing unauthorized entry is critical to operational security and compliance with regulatory standards.
