Abstracts

Anti-theft display device is a device that integrates security protection and product display functions. Its main function is to prevent exhibits from being stolen or moved without authorization, while ensuring that customers can freely try out the products. Anti-theft displays usually use physical fixation, electronic alarms, intelligent monitoring and other technical means, such as wire sensing, magnetic brackets, wireless sensors, etc., to ensure that exhibits are available for operation within a safe range. Once an exhibit is illegally removed, the connecting wire is cut, or it leaves the set range, the system will automatically trigger an alarm to remind staff to take measures. Some advanced anti-theft displays also have remote monitoring, intelligent networking and charging functions, which can provide continuous power for exhibits and work in conjunction with the store security system to achieve real-time monitoring and management.

The global Anti Theft Display Device market size was estimated at USD 291.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.80% during the forecast period.
