Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Anti-theft Screw competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Anti-theft screws are specially designed fasteners, mainly used to prevent unauthorized removal or theft, and require special tools for installation or removal. Anti-theft screws are based on reverse locking and anti-theft steel sleeve technology, using high-strength steel or stainless steel, and are widely used in public areas such as automobile tires, license plates, solar panels, power facilities, public facilities (such as guardrails, street lights, manhole covers), power facilities, railway facilities, oil field facilities, public fitness equipment, etc. From the perspective of the global market, anti-theft screws are on the rise. The Asia-Pacific region (especially China, India, and Southeast Asia) will become the core driving force for growth, and the North American and European markets will maintain steady growth. Infrastructure construction in Asia-Pacific regions such as China, India, and Southeast Asia has accelerated, and the demand for low-cost anti-theft screws has increased significantly. The demand in the automotive and public facilities sectors in the North American market is stable, and European countries such as Germany and France have strict requirements on product compliance (such as REACH environmental regulations). The development of mining and infrastructure in Brazil, Mexico and other countries has driven demand. The construction of oil facilities in Saudi Arabia, the United Arab Emirates and other countries has driven market growth. The increase in infrastructure investment, the safety upgrade of the automotive industry, the demand for anti-theft of public facilities, and the policy support issued by various governments are all driving the development of the anti-theft screw market. The removable type is widely used in guardrails, automobiles and other fields due to its high flexibility; the removable type is mainly used in one-time anti-theft scenarios (such as

manhole covers). Leading manufacturers occupy the high-end market, with leading technology and high prices, and mainly supply the North American and European markets. In the future, anti-theft screws will develop in the direction of lightweight, high-strength, intelligent, and modular design, but they also face challenges such as cost pressure, technical barriers, and trade frictions.

The global Anti-theft Screw market size was estimated at USD 617.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
