Abstracts

Anti-tuberculosis medicine encompasses a specialized class of pharmaceuticals designed to treat tuberculosis (TB), an infectious disease primarily caused by *Mycobacterium tuberculosis*, with treatment regimens typically involving a combination of first-line drugs such as isoniazid, rifampicin, ethambutol, and pyrazinamide to prevent drug resistance, while second-line drugs like fluoroquinolones and injectable agents are reserved for multidrug-resistant (MDR-TB) or extensively drug-resistant (XDR-TB) cases, adhering to protocols established by global health authorities like the World Health Organization (WHO). The market for these medicines is driven by high disease burden in low- and middle-income countries, increasing government and international funding for TB control programs, growing awareness and diagnostic capabilities, and the ongoing development of novel drug formulations and shorter treatment regimens to improve patient compliance and outcomes. Key challenges include the rising incidence of drug-resistant strains, supply chain and accessibility issues in underserved regions, pricing pressures, and the need for continuous innovation to combat evolving bacterial resistance, while opportunities lie in expanded healthcare infrastructure, public-private partnerships, and advancements in fixed-dose combinations and new molecular entities that offer improved efficacy and safety profiles. Major players in this market include multinational pharmaceutical companies such as Johnson & Johnson (bedaquiline), Otsuka Pharmaceutical (delamanid), Lupin Limited, Sanofi, and Macleods Pharmaceuticals, alongside numerous generic manufacturers, with market dynamics heavily influenced by procurement policies of global health organizations, national tuberculosis programs, and initiatives like the Stop TB Partnership and The Global Fund to Fight AIDS, Tuberculosis and Malaria.

The global Anti Tuberculosis Medicine market size was estimated at USD 1380.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25%

during the forecast period.
