Report Overview

Anti-veg drugs, also known as anti-vegetarian or meat-flavoring drugs, are pharmaceutical or nutraceutical products designed to enhance the taste of plant-based foods by mimicking the flavor, texture, or sensory experience of meat. These products often contain synthetic or natural compounds, such as heme iron (derived from legumes or yeast), flavor enhancers, or texture-modifying agents, to replicate the umami-rich profile of animal-based proteins. They cater primarily to flexitarians, vegetarians, or vegans seeking familiar meat-like experiences without ethical or environmental concerns, as well as to meat-eaters looking to reduce consumption without sacrificing taste. The market intersects with broader trends in alternative proteins, clean-label demand, and health-conscious eating, positioning these drugs as a bridge between traditional diets and sustainable food innovation.
