Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Anti Veining Additive competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Anti-veining additive is a kind of material which can change the violent expansion behavior of quartz sand in molding sand at 573° or strengthen the hot strength of molding sand through high temperature phase transformation, inert shielding or chemical passivation. It can absorb expansion stress and buffer sand displacement during casting, thus preventing liquid metal from invading sand mold micro-cracks and eliminating dendritic metal protrusions on casting surface.

The global Anti Veining Additive market size was estimated at USD 145.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Anti Veining Additive market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
