Abstracts

Anti-wandering door systems are specialized access control solutions designed to prevent unsupervised or unauthorized movement of at-risk individuals, particularly those with cognitive impairments such as dementia, Alzheimer?s, or developmental disabilities, by integrating sensors, alarms, door locks, and monitoring technologies to detect and deter exit attempts while allowing safe, authorized passage through controlled entry points. These systems often employ a combination of pressure mats, motion detectors, magnetic contacts, and delayed egress mechanisms, and may be integrated with nurse call systems or centralized monitoring platforms to alert caregivers in real-time, ensuring both safety and autonomy for vulnerable populations in residential care facilities, memory care units, hospitals, and private homes.
