Report Overview

Antibacterial cotton spunlace nonwoven fabric is a nonwoven fabric material processed by a special process. It combines the natural fiber advantages and antibacterial properties of cotton spunlace nonwoven fabrics, and is an important innovation in modern textile technology. Antibacterial cotton spunlace nonwoven fabrics use natural fiber pure cotton as the main raw material, ensuring the natural, environmentally friendly and biodegradable nature of the product. During the production process, the pure cotton fibers are first arranged into a mesh structure through processes such as opening and loosening cotton, and then the high-density needle-shaped water column formed after pressurization is used to entangle the cotton fibers into cloth through the action of the spunlace machine. Finally, through antibacterial treatment, the nonwoven fabric is given antibacterial properties, which effectively inhibits the growth of bacteria.
