Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Antibacterial and Mildew-Proof Cold Storage Material competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Antibacterial and mildew-proof cold storage material is a functional composite material with both temperature control and antibacterial and mildew-proof functions. It can absorb heat and lower the temperature when the ambient temperature rises, and release the stored heat when the ambient temperature drops, thereby achieving cold storage and temperature regulation. At the same time, by introducing antibacterial agents, mildew-proof agents into the material or adopting special structural design, it can effectively inhibit the growth of bacteria and mold. It is widely used in cold chain transportation, food preservation, medical storage and transportation, smart textiles and other fields with high requirements for temperature control and hygiene.

The global Antibacterial and Mildew-Proof Cold Storage Material market size was estimated at USD 561.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.60% during the forecast period.
