Abstracts

Antibacterial personal wipes are single-use, pre-moistened disposable cloths or towelettes infused with antimicrobial agents such as alcohol, benzalkonium chloride, or other EPA-registered disinfectants designed to reduce or eliminate bacteria, viruses, and other pathogens on skin or surfaces. These products are formulated for hygiene maintenance in both personal and on-the-go contexts, serving functions ranging from hand sanitization to surface disinfection in environments where soap and water are unavailable. The wipes are typically made from nonwoven fabrics like spunlace or airlaid materials that balance durability, softness, and liquid retention, and they are often packaged in portable, resealable pouches to maintain moisture and efficacy. Marketed for convenience, safety, and infection control, antibacterial personal wipes are used across healthcare, travel, childcare, food service, and general consumer segments, with formulations varying in strength, scent, skin gentleness, and environmental impact (e.g., biodegradability or alcohol-free options).

The global Antibacterial Personal Wipes market size was estimated at USD 3150.12 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
