## Abstracts

Antibiotic Impregnated Catheters are medical devices that reduce the risk of bacterial colonization and infection by impregnating antibiotics on or inside a catheter. It works by slowly releasing antibiotics that inhibit the growth of bacteria on the surface of the catheter and the formation of biofilms, thereby reducing the incidence of catheter-associated infections. These catheters are commonly used in medical scenarios such as central venous catheters, ventricular shunt catheters, and urinary catheters, especially in patients requiring long-term indwelling catheters, to significantly reduce the risk of infection.
