Abstracts

Antibiotic also called an antibacterial, is a type of antimicrobial drug used in the treatment and prevention of bacterial infections. They may either kill or inhibit the growth of bacteria. A limited number of antibiotics also possess antiprotozoal activity. Antibiotics are not effective against viruses such as the common cold or influenza; drugs which inhibit viruses are termed antiviral drugs or antivirals rather than antibiotics. More than 15.0% of the deaths, in children below the age of five, are estimated to be due to pneumonia and according to the statistics provided by the WHO about 9.2 million deaths were recorded in 2015. Similar to tuberculosis, the highest prevalence of the disease is identified to be in the South Asian and Sub-Saharan regions. Currently, the required antibiotic treatment is available only to one third of the infected population, thereby increasing the disease burden.

The global Antibiotics market size was estimated at USD 51.2 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
