Abstracts

Antiblock masterbatch is a highly concentrated additive formulation used primarily in the plastics industry to prevent the undesirable sticking or blocking of polymer films during production, storage, or end use. This specialized additive consists of finely dispersed inorganic particles, such as silica or talc, suspended within a polymer carrier resin compatible with the base plastic matrix; it functions by creating microscopic surface roughness on the film, which reduces the contact area between layers and allows air to escape, thereby minimizing adhesion.

The global Antiblock Masterbatch market size was estimated at USD 2515.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.75% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Antiblock Masterbatch market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
