Abstracts

Antibody purification kits are specialized biochemical tools designed to isolate and purify antibodies from complex biological mixtures such as serum, hybridoma culture supernatants, or recombinant expression systems, utilizing techniques like affinity chromatography (most commonly with Protein A, G, or L resins), ion exchange, or size exclusion to achieve high-purity antibody preparations essential for research, diagnostic, and therapeutic applications. These kits typically include pre-packed columns, buffers, resins, and detailed protocols, offering researchers a standardized, reproducible, and time-efficient method to obtain antibodies free from contaminants like other proteins, nucleic acids, or cellular debris, thereby ensuring reliability in downstream uses such as immunoassays, Western blotting, or clinical development.
