Report Overview

Antibody purified magnetic beads are a type of magnetic beads that are specifically designed for antibody purification. They are commonly used in research and diagnostic applications to isolate and purify antibodies from complex mixtures. The antibody purified magnetic beads typically consist of magnetic particles (such as magnetic beads) coated with a ligand that specifically binds to the Fc region of antibodies. This ligand can be Protein A, Protein G, or Protein L, depending on the species and subclass of the antibody being purified. The working principle of antibody purified magnetic beads is based on the specific interaction between the antibody and the ligand on the magnetic beads. When the antibody purified magnetic beads are added to a sample containing antibodies, the antibodies will bind to the ligand on the beads, while other non-specific components are washed away. The magnetic beads can then be easily separated from the solution using a magnetic field, allowing for the isolation and purification of the antibodies.
