Abstracts

Antimicrobial coil coating is a specialized type of industrial coating applied to continuous metal coils—typically aluminum or steel—during manufacturing, which incorporates antimicrobial agents such as silver ions, copper, or zinc to inhibit the growth of microorganisms like bacteria, mold, and fungi on surfaces. These coatings are engineered to provide long-lasting protection and are widely used in environments where hygiene is critical, including healthcare facilities, food processing plants, HVAC systems, and public transportation, combining the protective and aesthetic properties of traditional coil coatings with an added layer of microbial resistance to meet increasing regulatory and consumer demands for cleaner surfaces.

The global Antimicrobial Coil Coating market size was estimated at USD 1425.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.25% during the forecast period.
