Abstracts

Antimicrobial copper film is a specialized material composed of a thin layer of copper or copper alloy, often applied as a surface coating or adhesive-backed film, engineered to continuously eliminate a broad spectrum of microorganisms—including bacteria, viruses, and fungi—through the release of copper ions that disrupt cellular integrity and metabolic functions. Its efficacy is rooted in copper's inherent biocidal properties, which are enhanced through manufacturing techniques that maximize surface area and ion release, making it suitable for high-touch surfaces in healthcare, public transportation, food processing, and other environments where hygiene is critical. The product is typically characterized by durability, ease of application, and compliance with regulatory standards for antimicrobial efficacy, positioning it as a proactive tool for infection control.

The global Antimicrobial Copper Film market size was estimated at USD 285.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
