Abstracts

Antimicrobial floor coatings are specialized surface treatments engineered to inhibit the growth and proliferation of microorganisms, such as bacteria, mold, and fungi, through the integration of active agents?commonly silver ions, copper, or quaternary ammonium compounds?that disrupt cellular functions upon contact. These coatings are applied to flooring substrates in environments where hygiene and contamination control are critical, providing a durable, often seamless barrier that reduces microbial load and supports infection prevention protocols. Their functionality extends beyond traditional protective or decorative floor finishes by offering a proactive, long-term antimicrobial effect, which is increasingly valued in sectors like healthcare, food processing, pharmaceuticals, and educational institutions.

The global Antimicrobial Floor Coating market size was estimated at USD 245.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
